

1.10.- Prevention service for groups or collectives for the determination of SARS-CoV 2 virus

(PCR Group System)

Description

New system to perform a group PCR test of up to 20 people at the same time, achieving a greater range in the detection of COVID-19.

This means an economic saving for groups, since with the cost of a group PCR several results are achieved simultaneously.

Objectives

To protect the bubble groups, which can be: work, social or educational.

Target

Administrations, Public and Private Companies and City Councils with competences in the service.

Results / Advantages

- Results in less than 24 hours after receipt of the sample in the laboratory.
- Possibility of delivery and collection.
- Our oropharyngeal sampling methodology is simpler and suitable for patients of all ages[1].
- Direct test report in your inbox.
- More than 20,000 samples tested in wastewater ensure improved PCR analysis techniques.
- Thanks to a team of experts we can deliver the result with 99.5% reliability.

Actions

Performing a single analytical determination of the pooling sample reduces the number of tests and therefore saves the client money without compromising the performance of the service.
